Release Note

Fleekdrive Desktop Ver. 3.0.0　June 13, 2020

Fleekdrive

Functional Improve

No	Functions	Fixes
1	Sync Settings	Disable update function of Fleekdrive desktop client application by PUSH from cloud server.
2	Uplink synchronization	If the uplink synchronous monitoring process is stopped, the monitoring process is automatically restarted.

Bug Fixes

No	Functions	Fixes
1	Downlink synchronization	If you try to synchronize a file that contains a control code in the file name, the subsequent downlink synchronization will fail. (Fixed so that it does not affect downlink synchronization of other files)
2	Downlink synchronization	Changes in spaces within the "shared" space are not synced when syncing My Spaces
3	Uplink synchronization	Local space removal may not sync to Fleekdrive.
4	Uplink synchronization	If you rename a file in a local folder, the deletion of that folder will not be synced to Fleekdrive.
5	Uplink synchronization	Renaming Excel file in sync space locally after editing locally may only sync the rename.
6	Uplink synchronization	Uplinks are not synced when files are added locally in the space moved on the server side.
7	Uplink synchronization	If you start Fleekdrive desktop without internet connection and leave it for 5 minutes, then after connecting to internet, local changes will not be detected and uplink synchronization will not occur.
8	Bidirectional synchronization	If you change the name of a sync space from uppercase to lowercase on Fleekdrive, the FD desktop may delete the space in the sync space.
9	Bidirectional synchronization	If you correct the file name on the server, the corrected file name will not be synchronized locally
10	Bidirectional synchronization	Temporary Office files may be reflected on the server in upstream synchronization
11	Sync Settings	On the sync setting screen, if you remove the check from the space currently being synced and press the "OK" button, the screen will not close
12	Sync history	I open multiple sync history screens on the client side in windows.
13	Update Application	If the update process of the Fleekdrive desktop client application fails in the middle, it will no longer be synchronized.
14	Update Application	I don't know that the app has been installed and updated
15	Update Application	Display "Do you want to execute with administrator privileges?" Window during update
16	Client log	Output content of log is garbled
17	Delete local file	Instead of directly deleting the files stored in the client PC without putting them in the trash box, put them in the trash box.
