Bug Fixes

No	Functions	Fixes
1	Update	If the network is disconnected at the start of the update, the update will fail and then you will not be able to synchronize.
2	Update	Update to a version other than the latest version fails
3	External storage	When setting a network drive in the sync folder, once the connection with the network drive is lost, it will not be synced up until the app is restarted.
4	Bidirectional synchronization	If you delete all file spaces locally on the server side, it may not be synchronized after that.
5	Uplink synchronization	If a proxy is set, downlink synchronization is possible, but uplink synchronization does not work.
6	Downlink synchronization	If you have a space under the sync space that isn't shared with you, any changes in that space will create that folder locally even though it's not shared.
