Functional Improve

No	Functions	Fixes
1	Uplink synchronization	Change so that local file changes are detected even when the application is stopped.

Bug Fixes

No	Functions	Fixes
1	Downlink synchronization	If you update immediately after moving on the server side, a version file may be created.
2	Downlink synchronization	If you delete a file immediately after moving it on the server while synchronization is paused, it will not be recorded in the synchronization history.
3	Downlink synchronization	If there are files deleted on the FD side during manual synchronization, an error will occur.
4	Uplink synchronization	When a file is moved on a local PC, the synchronization status of the destination parent folder may be changed to the editing status.
5	Uplink synchronization	If you open a locally synchronized office file directly in the synchronization space, edit it and save it, the "Delete" and "Add" of the target file will be up-synchronized.
6	Uplink synchronization	If you set a network drive as a sync folder and add a folder locally, the files under the folder may not be synced.
7	Delete sync client	If you are using Fleekdrive Desktop on the Mac version and delete the sync client or delete the license on the FD side, the following error message will remain in the log and the icon will continue to remain in the task tray.
8	Start the application	If the user name and the user folder name are different, the app cannot be started at the first startup.
