Functional Improve

No	Functions	Fixes
1	Downlink synchronization	The resynchronization process does not delete files and folders that exist only locally.
2	Service outage	When the service is stopped, it appears in the log.

Bug Fixes

No	Functions	Fixes
1	Uplink synchronization	If a folder is deleted on the local side after performing an operation on a folder for synchronization on the server side, and a folder with the same name as the deleted folder is added on the local side with files inside, Uplink synchronization will not be performed properly.
2	Downlink synchronization	Failure to pause during downlink synchronization.
3	Uplink synchronization	If I move a space on the server side and perform an operation on a locally synchronized folder before it is reflected on the local side, I get an error, but no error message appears in the sync history and change history details.
